Future Society Created by Architecture -The Efforts of DADC

Information-technology Promotion Agency (IPA)
**President, Digital Architecture Design Center (DADC)**
Saito Yutaka

IPA Better Life with IT

✓ **Society 5.0 is a human-centric society**. It is important to enhance industrial competitiveness, ensure safety and security, and build a society in which people can live in prosperity **by changing the structure from the conventional vertically divided regulatory/industry structure to a layered structure that horizontally develops digital infrastructure for each function across different areas,** based on the emergence of new technologies.

✓ To realize such a structural shift, **architecture** as a society-wide blueprint **is essential**.

01 Developing individual digital infrastructures based on the industrial structure of **each occupation**

02 Governance by regulations is also **divided vertically for each ministry** and based on physical elements not on data (cyber).

03 Under disorganized infrastructures, Japanese companies cannot run perform fully **data-driven business. There is a possibility that data will not accumulate in Japan and** may flow out abroad.

01 Designing an overall blueprint (architecture) for connecting systems **with an eye to the future of the digital market**.

02 Based on the architecture, develop a new digital infrastructure **horizontally** in consideration of total optimization. Japanese companies can be leaders.

03 As a result, **industries of data-driven business will be developed** in Japan, **industrial competitiveness will be enhanced**, and **safe and secure distribution of data** with consideration for personal data will be ensured.

Positioning of the DADC (Digital Architecture Design Center)

✓ While involving stakeholders from industry, academia, and the government flexibly and smoothly at the request of the government and private companies, **the DADC designs architecture for realizing Society 5.0 in a neutral and transparent manner** centering on the collaborative area based on global trends. **Advanced knowledge is accumulated by the DADC** and is also linked to human resource development.

✓ The relationship with the Digital Agency has also been clarified. The Priority Policy Program for the Realization of a Digital Society which was approved in the Cabinet meeting held on June 18 clearly stipulates that **the Digital Agency and the DADC will work together to organize architecture design technologically for each area that is focused on, and accumulate the knowledge gained from their efforts.**

The DADC was founded with the goal of becoming a transparent and neutral institute to which comprehensive knowledge from various collaborations between industry, academia, and the government is gathered. It accumulates advanced knowledge and continuously contributes to society.

Founded on May 15, 2021, which was the implementation date of the Reform Act on Facilitation of Information Processing

Direction of efforts for developing the digital market infrastructure which stimulates conversion of the structure of industry (Revised edition)

How society should be in the future

↓

Issues to be considered based on human nature

◆ **UX =** Society that **revolves around "things"**
◆ Society in which **humans and machines (AI and robots) coexist**
◆ Society in which **data/AI make judgments instead of humans**
◆ Society in which **harmony among people is regained**
◆ Society in which **information is shared equally**

"A human-centric society in which both economic development and solution of societal challenges are achieved: Realization of Society 5.0"

Human & Machine & Organization

↑

Service delivery with optimum UI/UX

	Approach from Artifacts ←**Fusion**→	**Approach from the Concept**

Design principles focusing on a human-centric/human society ↔

Governance that realizes cooperation
Seek governance and rules

Governance that can apply vertical-horizontal cooperation to society
- How contracts and risks/responsibilities (distribution) in digital society should be
- Mechanisms to ensure the comprehensive reliability of the entire system

How a dynamic social system that can flexibly respond to VUCA* and the speed of environmental change should be ↔

Horizontal coordination
Standardization of functions (applications) and data

Modular structure that mutually connects services individuals have developed
- Establishment of a service infrastructure using algorithms suited for human behavior
- Control of things/establishment of a control infrastructure | Establishment of a data-centric (market/society) trading infrastructure
- Standardization of the common data model for society and establishment of a utilization infrastructure (base registry)

How the distribution of safe and secure data and the trust that supports CPS should be ↔

Coordination of vertical elements
Development of a CPS implementation environment

A layered structure that connects both Cyber and Physical **safely and efficiently while maintaining reliability**
- Next-generation cloud infrastructure that also supports OT
- Establishment of a versatile distributed processing model

*VUCA: Volatility, Uncertainty, Complexity, and Ambiguity

Digital Architecture Design Center

Collaboration with private companies (Implementation of the Incubation Lab)

✓ **The DADC responds to requests not only from the government but also from private companies and carries out architecture design to realize Society 5.0 (The Incubation Lab).**

  ➤ As the first Incubation Lab, we conducted a feasibility study for six months on the subjects we adopted last October. **Work on one of the subjects is in full swing and we have been implementing architecture design continuously.**

  ➤ For the second Incubation Lab, we asked for subjects in May and **adopted two. We then started a feasibility study in July.**

1st Incubation Lab (Activities already finished) [October 2020 - March 2021]	2nd Incubation Lab (Subjects determined) [From July 2021]

Theme (1) Consideration of the architecture for realizing **a governance model** that ensures the safety and security for more pervasive use of **service robots** and a **business eco system** including related industries

Theme (1) **Intelligent building** architecture as infrastructure for Society 5.0

Examination results It is important to <u>make the collaborative area more concrete</u>, and the <u>DADC should officially examine the subject</u>.

[Details] Consideration a smart building architecture with a collaborative area of "building OS" (a data linkage platform that links building equipment and various services and accelerates application development), which aims to further evolve Smart Cities and create new added value.
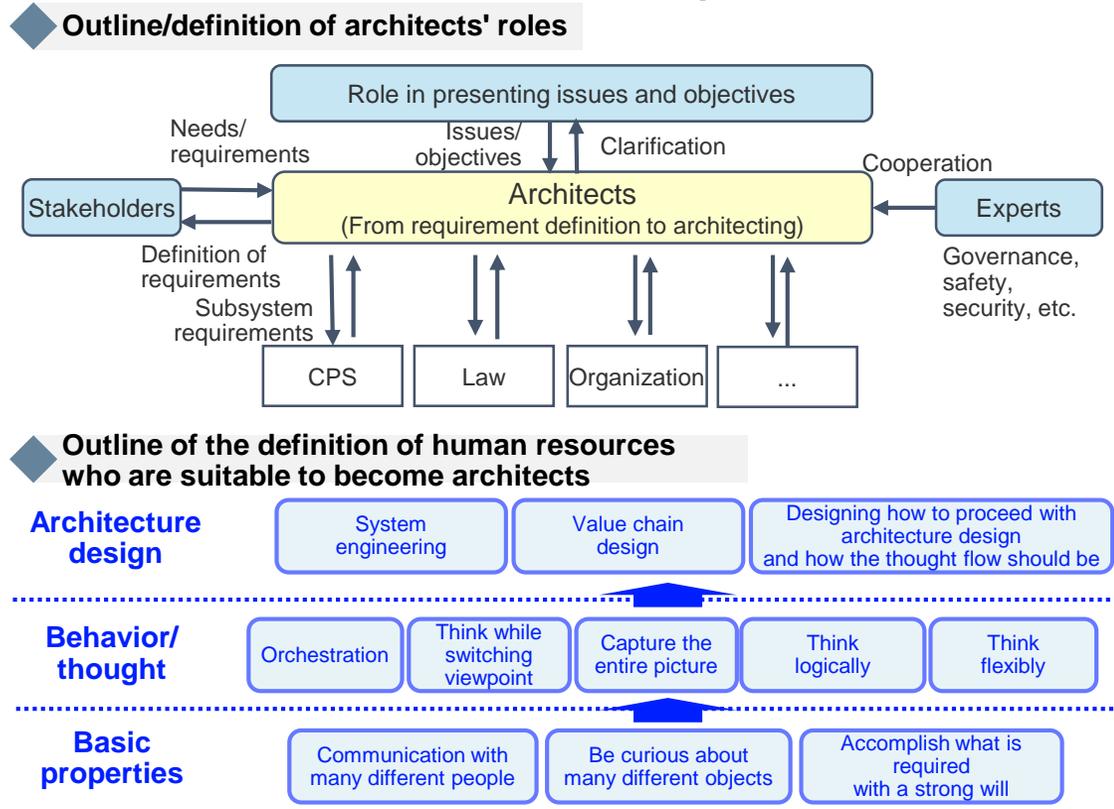

Theme (2) Consideration of architecture that enables **the distribution and use of data among multiple areas** after having ensured the reliability through **the third-party data transaction function**

Theme (2) **Consideration of guidelines for digital identification corresponding to services**

Examination results Examination of the use cases should be important and given priority; therefore, the <u>DADC should facilitate activities centering around business operators</u>, and at the same time, <u>participate in such activities as needed</u>.

[Details] In consideration of the trends of overseas business and standardization, we concretely delineate a picture of the future of the society and industrial structure to be realized by the future digital identification (identification/personal authentication) and perform architecting toward the realization of the delineation. We will focus on examining the collaborative area for digital identification in which a variety of services and infrastructures can be complied with and organize our examination as guidelines.

Design Center

Efforts for human resource development

✓ **To develop the human resources (architects) who design architecture including industrial structure/governance changes toward the realization of Society 5.0, the DADC clarified roles of the architects and defined human resources who could fulfill those roles last year.**

✓ **This fiscal year, to develop architects effectively, we will examine a curriculum including places for acquiring knowledge and getting actual experience (OJT/PBL) as well as a system for human resources who are suitable to become architects to continuously participate in DADC activities and grow as architects.**

Last year's efforts: Clarification of human resources to be developed

◆ **Outline/definition of architects' roles**

◆ **Outline of the definition of human resources who are suitable to become architects**

Architecture design	System engineering	Value chain design	Designing how to proceed with architecture design and how the thought flow should be
Behavior/ thought	Orchestration / Think while switching viewpoint / Capture the entire picture / Think logically / Think flexibly		
Basic properties	Communication with many different people / Be curious about many different objects / Accomplish what is required with a strong will		

This year's plan: Creation of a system for human resource development

◆ **Consideration of a training curriculum for developing architects**

◆ **Examination of a system that continuously develops architects**

People who are suitable to be architects/future executive candidates

◆ Realization of Society 5.0
◆ Industrial/ corporate changes

◆ **Actual experiences (provision of disastrous experiences)**
◆ **Interactions with many different people**
◆ **Training**

**Emergence of human resources who will lead industrial structural changes**

International research related to social implementation of architecture

✓ **The DADC has analyzed practices, such as GAIA-X, which are being promoted overseas. As a result, we have found out that the implementation of the new social infrastructure will take several years, including both the public and private sectors working together to promote institutional design and technological development, as well as issuing statements for broad collaboration with stakeholders in Japan and overseas. It is important that these activities are performed continuously for several years.**

✓ **We will continuously perform the investigations and analysis required to build an industry-academia-government eco system for designing and implementing the architecture that the DADC is promoting, and make necessary recommendations to the Japanese government and the industrial world.**

■ Major achievements in 2020

■ We have investigated practices such as the GAIA-X project in Europe, PI4.0 (Plattform Industrie 4.0) in Germany, and NIST (the National Institute of Standards and Technology) in the U.S. We have designed a new social infrastructure (for example, a data linkage platform) across multiple industries as an area for collaboration and analyzed the flow to social implementation.

■ **What these practices have in common is** that they all have been not only focusing on the quality of the design itself but also **facilitating consensus-building efforts for wide use of the design results, from a strategic perspective, since the early stages**.

Figure: Flow to social implementation in EU (Image)

Strategic activities	Examples of GAIA-X and PI4.0
(1)	• The European Commission released GDPR (personal data protection, enacted in 2016) and an EU-wide data strategy (company/industry data, released in 2017).
(2)	• PI4.0 was launched through collaboration between multiple government ministries and industries and disseminating "Vision 2030", which describes a future digital eco system (June 2019). • The German and French ministers declared the launch of the GAIA-X project in October 2019, and GAIA-X was launched officially by 22 German and French companies and organizations in September 2020.
(3)	• The IDSA (International Data Spaces Association) formulated authentication standards (data use control, information model, access control, etc.) to be applied technologically under GAIA-X in March 2020. • To carry out technological demonstrations and improvement of GAIA-X, more than 50 use cases were implemented in 9 areas. "GAIA-X Hub", to which the verification members belong, was organized and constantly releases information regarding its efforts and members on the GAIA-X website.
(4)	• In the declaration of 26 Cabinet-level representatives in EU for the creation of the EU cloud, they announced that 2 billion euros would be contributed between 2021 and 2027, and GAIA-X would be positioned as the leading project (October 2020). • BMWi (The Federal Ministry for Economic Affairs and Energy) in Germany announced that a fund of 186.8 million euros would be provided in total to companies (especially small and medium-sized companies) which use GAIA-X in a practical manner by 2024 (March 2021). • More than 500 organizations from around the world have participated in GAIA-X. To realize Vision 2030, Germany is also promoting bilateral partnerships with France, the Netherlands, the U.S., and Japan for PI4.0.
(5)	• With regard to GAIA-X, standards relating to institutions, industries, and technologies will be examined continuously with relevant organizations both inside and outside of the EU.

Digital Architecture
Design Center

For future development

✓ **One year has already passed since the DADC was founded. While embodying the whole picture of Society 5.0 in a layered structure, we have carried out activities such as three projects as use cases, human resource development, and international investigations in order to realize the Society 5.0 project.**

✓ **We still have a long way to go to reach the goal of the DADC. We need to further strengthen the driving force for the project, clarify and increase awareness of its positioning in society, and improve organizational resources.**
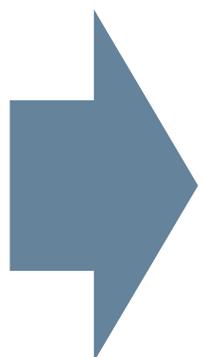

- **Toward the realization of Society 5.0, we want to accumulate advanced knowledge including design methods and frameworks related to architecture, develop human resources who will use this knowledge, and continuously contribute to society.**

- **We want everyone to take an active interest in architecture and the DADC's activities, and we also want you to participate in the DADC's activities in terms of business transformation and human resource development.**
